

I am in full support the Comment submitted by The American Radio Relay League concerning Docket ET 03-104. At this time there has not been enough research in this field to show that implementing Broadband over Power Line will not completely disrupt licensed services in the 2MHz to 80MHz frequency range. There are other means available to bring BPL into homes. It is hard to believe that the FCC would even consider approval of ET 03-104 which will violate their own rules on non-interference is not in the best interest of the country. Please vote against ET 03-104
Thank You,
Donald R. Thie
